

4' x 8' Raised Bed Assembly Instructions

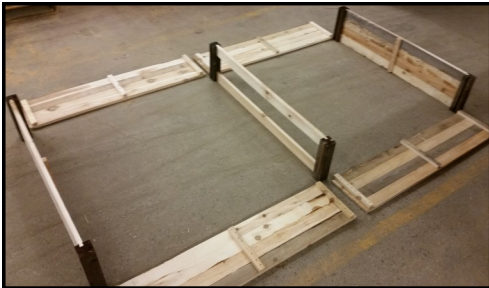

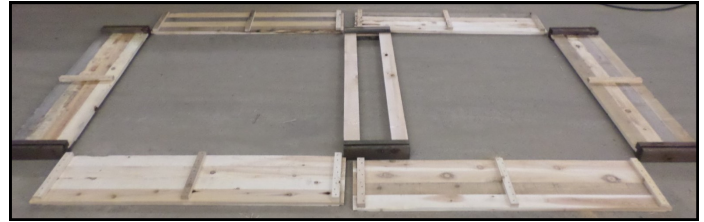

Parts List

- 2 - 4' Cedar raised bed sides with attached stained corners
- 1 - 4' Cedar center divider with attached stained corners
- 4 - 4' Cedar raised bed sides without attached corners

Step 1

The raised bed has six pre-assembled cedar sides and one center divider. The left side, right side, and center divider come with the 2" x 2" stained corners already attached. The other four sides have a sliding dovetail joint that will connect to the attached corners. To start, lay out the sides as shown in the picture to the right with the sides that have the attached corners opposite from one another. Lay out the sides without the attached corners opposite from one another with the center divider in the middle.

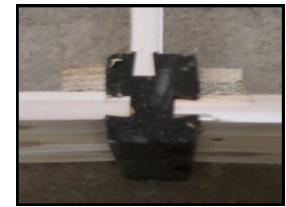

Step 2

Set the right side, left side, and center divider up on end using the attached corners to keep them upright. Line up the sliding dovetail joints in the corners and push down on the ends applying equal pressure to both sides. Repeat this step on all sides.

Step 3

When assembled, the outer corners will look like the picture on the left, and the center divider will look like the picture on the right.

Step 4

Fill your raised bed with your favorite type of soil and watch your plants grow. Happy Gardening!
